

# Agile Product Development

Flexible project management in all situations

## Background

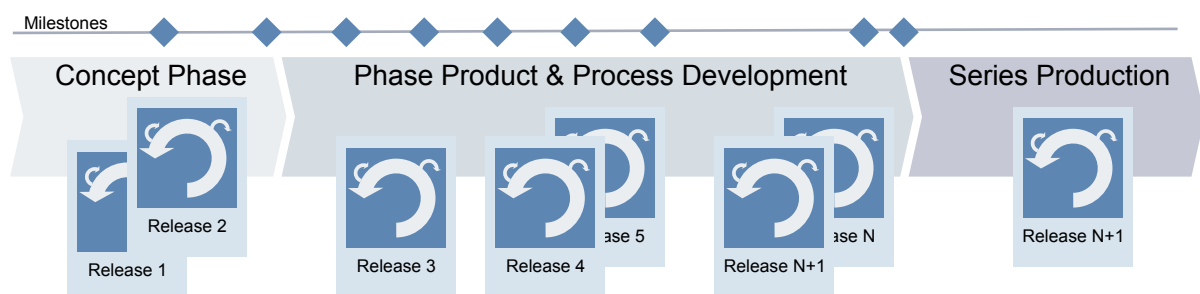

For years, agile development methods achieve an ever-increasing acceptance in software development. In this industry section the advantages of the agile methods compared to traditional methods are known. The flexibility in the project in conjunction with high quality products are one of the main advantages.

The agile models promise quick responses to changes in the projects with continued high quality and an efficient use of resources compared to the classic procedure models.

In particular the project management after the SCRUM approach is one of the most popular agile methods in Germany.

Due to a combination of software, hardware, mechanic and mechatronic components is a complete change from the traditional process models to agile methods is not likely yet. For these products a change to agile development simply does not make sense yet.

A possible solution could be a hybrid project management approach between agile and classic methods which must be implemented in the organization.

# Agile Product Development

Flexible project management in all situations

## Our offer

- „Ready for Agile“

We analyze together with you which agile methods and tools for your business and your project situations are the best option and support you in the implementation.

- ASPIICE together with agile methods

Together with you we identify areas of action to develop appropriate measures for a successful assessment.

- Interim (agile) Project Management

We support you personally with our consultants in the implementation of agile projects.

- Coaching of Project Members

Our consultants give their expertise to your employees through training workshops or personal coaching.

- Kanban Implementation

We analyze and advise you on how to establish an efficient Kanban system in your project.

## Our reference

- The consultants of INVENSITY support already well known Tier1 suppliers in the automotive industry within agile development environments.
- Furthermore our consultants are gaining new experiences and solutions in our projects as a project manager in an agile environment.
